DriveAbility

Driver Rehabilitation

Disabled, not immobile

Technological innovations make it possible to operate a motor vehicle despite disabilities ranging from amputations to spinal cord injuries. The key is to have the right equipment—and the training to use it.

The DriveAbility program puts you in the driver's seat

The DriveAbility adaptive driving program offers the services of the only driver educators in the state with dual certification in occupational therapy and driver education. We evaluate abilities, recommend equipment, teach new skills and develop strengths that help people with disabilities recover or maintain independence.

DriveAbility is a new service of Exeter Healthcare, a trusted area provider of residential and outpatient rehabilitation.

The Adaptive driving program serves a range of disabilities

- Acquired head injury
- Amputation
- Aneurysm
- Arthritis
- Cerebral palsy
- Cerebral vascular accident
